

Thank for choosing our Alchimique and Treasure flatware collection. It is a special and precious product. The pvd coating (Gold-Bonze-Titanium) treatment is made at the end of the manufacturing process.

CARE INSTRUCTIONS

- Do not use deteratives containing Chlorine, Chlorides, and acid solution which could provoke corrosion but neutral, or slightly alkaline cleanser only. **In particular with Trasure and Alchimique pvd coated cutlery we strongly advise not to use this kind of washing liquids** since they could actually damage, or remove the coating from the stainless steel during the washing cycle. In case of dishwasher with automatic dosage setting we suggest to carefully check the setting to be sure the washing liquid and rinse liquid are correctly diluted and therefore not aggressive.
- Do not use abrasive products to clean the cutlery

Knives

The knives take as usual little bit of extra care and attention to remain beautiful. We suggest to:

- Always rinse the knives after use to remove food but never leave them to soak too long.
- Wash the knives in the dishwasher in a separate basket to avoid contact with other cutlery or metal objects.
- Remember to open the dishwasher door immediately after the cycle is completed and dry the knives with care.

If you follow these simple advice, you will enjoy your Alchimique and Treasure cutlery for many years to come.
